ICT for green

- Subtitling is directly dependent on the use of technology
- It requires massive multimodal information management
- It includes online data management

Definition of

Carbon footprint

A carbon footprint is the total greenhouse gas emissions caused directly and indirectly by individuals, organizations, or a product. Generally, the carbon footprint can be defined as the full life cycle of carbon equivalent emissions and effects from all products and services. The ICT sector includes all consumer and corporate devices (Batmunkh , 2022)

Sustainability in automatic subtitling

- Improve the efficiency of natural language processing techniques.
 - Performance in multimodal data processing.
- (Müller et al., 2019)

How to measure the carbon footprint?

ISO standards

- ISO14064
- ISO14067
- ISO14040

Protocol of Bestari et al. 2015

- Based on ISO standards
- Specific for office environments
- Simplified system to encourage its application

Other methods

- Hintemann et al. 2019
- Marks et al. 2021
- Obringer et al. 2021

Specific for computers
